

ETCO₂ Sampling Cannulas T-Connector

MEDSOURCE

MedSource ETCO₂ Sampling Cannulas allow for a breath-by-breath sampling of ETCO₂.

Button Filter

Minimizes entrance of moisture from sampling ports to monitor

Reflective Orange Connector

Pairs with sidestream low flow capnography monitors

Kink Resistant Tubing

Sampling of ETCO₂ in exhaled respiratory gases allows for healthcare workers to assess adequacy of patient perfusion, ventilation and oxygenation in patients receiving critical care. These cannulas pair with Capnograph Sidestream Monitoring Systems and come in a variety of configurations to meet hospital, acute care and prehospital ETCO₂ monitoring needs.

SPECIFICATION

- Reflective orange connector
- 7' of kink resistant tubing
- Not made with natural rubber latex
- PVC material not made with DEHP
- Pair with sidestream monitor (low flow 50ml/min)
